REPLACE COMPRESSOR IN DCA UNIT	GSO SVC SPOT		

Resolution

COMPLETE

[9/4/2019 10:50:29 AM WILHELM, SCOTT]

on arrival, checked in at desk, filled out jha form, went to machine room, found dca deenergized at the breaker, spoke to Craig joyce, found that a 250 amp breaker that serves the pool area, steam room and dca, burnt up and single phased the dca, m#dca5400-wh-0c, s#0736b455z, verified that compressor has a rotational short to ground, disconnected compressor wiring, started indoor blower to clear windows in pool area, spoke to supply house, a quote for parts is forthcoming, Craig wants 75 lbs of r22 factored into final quote, informed james, compressor has to be made and will take 2 weeks.

[10/14/2019 4:46:03 PM TUCKER, JORDAN]

checked in with front desk, filled out JHA form, helped tech 1, remove and replace compressor.

[10/14/2019 5:10:30 PM WILHELM, SCOTT]

on arrival, checked in with front desk, filled out jha form, deenergized dca, m#dca5400wh0c, s#0736b455z, using recovery and tank#002523, recovered 38.5 lbs of acidic r22, tank#004467, 18.5 lbs of acidic r22 and disposed of both, unit was approximately 20 lbs low on gas, removed old compressor and installed new one, using torch, unbrazed old drier and brazed in new one, charged ckt with 250 psi of nitrogen, found leak on suction line, discharged ckt, using torch, brazed leak shut, charged ckt again with 250 psi of nitrogen, leak gone found no others, put 2 vacume pumps on ckt will return tomorrow to complete repairs.

[10/15/2019 9:40:03 AM LITTLE, DEREK]

Checked in at the front desk. Filled out JHA. Helped Scott remove and install a compressor for DCA unit, will return tomorrow to help complete repair.

[10/15/2019 1:11:52 PM LITTLE, DEREK]

Assisted tech 1 with compressor replacement

[10/15/2019 1:18:49 PM WILHELM, SCOTT]

on arrival, checked in with manager, filled out jha form, went upstairs, found unit in 750 micron vacume, deenergized vacume pumps, let sit 30 minutes, no change, attempted to charge unit, found that reheat 3 way valve is seized and will allow gas to flow into reheat coil only, using magnet attempted to route gas into condensor, valve will not move and must be replaced, informed james at psg, gave prices and p/n of new valve for quote, unit is running in fan only, compressor replacement is complete.

Resolution

COMPLETE

[12/9/2019 5:24:19 PM GLEASON, DILLON]

Checked in on site with customer. Told customer we are here to do the heat exchangers for the spin room and the kids area. Went to roof and took unit apart. Got old heat exchanger out and replaced it with the new heat exchanger. Burn off heat exchanger and put unit back together. Job is complete

[12/9/2019 10:26:18 PM HUMBLE, CHRIS]

Checked in.

Removed old heat exchanger for kids room and gas piping.

Unwired all electric for it.

Installed new heat exchanger and high temp siliconed everything.

Hooked up gas piping and electrical.

Burned heat exchanger off and put panels back on it.

Repeated same thing for the cycle room unit.

Both units heating.

[12/13/2019 5:03:47 PM BOOHER, CHRISTOPHER]

Dca unit had noise. I found bad motor bearings and will be back monday to remove motor and take to motor shop. Found the inline duct heater not running, i checked unit and reset it and it came back up.

[12/16/2019 5:05:47 PM WILHELM, SCOTT]

On arrival, checked in with lenny baldassano, filled out jha form, found pool area at 72 degrees, dca in cool mode, checked stpts, found them to be far from normal, changed relay 1 function back to cool from heat?, set stpt to 85 degrees, set reheat from 72 degrees to 80 degrees and duct heat from 76 degrees to 82 degrees, dehumid stpt to 60%, unit went into reheat, and duct heat energized, observed unit till all stpts were reached, unit is up and running normally, space is at stpt.

[12/16/2019 11:36:04 PM BOOHER, CHRISTOPHER]

Arrived on site. Checked in and went to dca unit. I removed the motor and tech 2 came by and took it general motor repair. During that time i went to the roof to troubleshoot unit 7. (seperate call slip). Once motor arrived i installed motor, rewire, and adjust for belt tension. Started dca back up.

[1/2/2020 6:12:17 PM BOOHER, CHRISTOPHER]

Dca making grinding noise. Met with craig looked at blower and the shaft bearings are bad. Mentioned to craig about the new housing at burlington branch and agreed to use that rather than wait on parts. So me and c.humble removed the blower from the disabled dca in burlington (we are not charging labor for the removal of parts) this was o.k by james because projects was suppose to have pulled the parts out already after demo.. me and c.humble then went back to brassfield and installed the housing. We alligned the pulleys and adjusted the belt tension. We also delivered the other 2 blower motors and some othe components from the other dca unit. Unit is running smooth.

[1/3/2020 8:20:37 AM HUMBLE, CHRIS]

Removed old blower housing due to bearings failure.

Installed new housing from parts unit.

Adjusted everything and aligned everything.

Unit is operating correctly now and quietly.

[1/7/2020 10:16:17 AM JACKSON, JONATHAN]

I checked in with front desk, he told me a couple days ago it was 62 degrees in kids room and it was set to 74. On arrival the thermostat was satisfied at 74. I took a few temperature readings at supply and I got about 100 degrees. Went to roof to check cycling, and regulator. The unit was cycling properly, but regulator may be the problem being so old. While there I helped other tech get filters to roof.

Went in checked tstat. It was calling for heat. Went To the roof found unit with blower running but no heat operations. I went to check low voltage with my meter leads and the inducer relay closed but as i moved my leads around it would quit then run and quit again. I tightened all connections. Tested again same thing happening. I will get james to quote a board thats where the problem is.

[1/8/2020 12:18:18 PM BOOHER, CHRISTOPHER]

Came back today with the simplicity board. Unwire bad board and hook up the new one. Start unit checking operations.

Arrived at site, checked tstat in child care area. Went to roof found unit with blower and inducer running but no ignition. As i was getting voltage readings i was checking the terminals on rollout switch and ignition process started.something inside the switch is broke. I was going to order a rollout but it was a day or 2 wait period so i was able to find one at a different supply house and install. Unit is now up and running.

[1/9/2020 8:32:03 PM BOOHER, CHRISTOPHER]

Call back..i was at the office when craig called about kids room unit. I went back, went to roof and found unit with inducer running but no heat as soon as i went to remove the panel unit starts ignition. So, its not the new rollout because it manual reset, im now looking at the temp limit switch but unit is running great at this point.

Only thing i can think of is either a weak limit or airflow, i notices blower motor speed tap on low setting i moved it to high to insure enuff air movement, then before i left i went into the daycare to look at the grills. The supply grills seem to be clean and opened all the way. The returns definitely need cleaning and this could be the reason for this problem. I called james tonight and he is going to have someone go clean those grills tomorrow. I still think limit is weak but we will see what happens with cleaning the returns.

Checked in. Went to the spin room. Found cooling setpoint at 70 and heat setpoint at 66 mode was in auto. I know they like it 66 in the spin room but setpoint was set wrong. I dropped cool setpoint to 66 and dropped the heat to 63. As i was checking the supply temps i noticed it wasnt but 64 coming out with a 70 deg return so i went to the roof and found unit economizing with mech cooling locked out because it was 48 deg on the roof which is why my supply temp was high it was mixing cool outside air with the 70 deg return air, like it should. But i did find the linkage for the economizer had came undone as you will see in xoi so i fixed that while in there. when i was done with system jumped out the economizer was modulating like it suppose to to mix the air. This unit needs new economizer filters.

Checked in with front desk on arrival. Filled out jha. Got my ladder set up to go on roof. Started with the kids room rtu. When I got to the unit blower motor was just running. Unit had a fault on board saying limit switch was open. Checked the limit switch. Saw that the connections were bad. Changed those out with new connectors. Also we changed out bad regulator. When finished and checked all heating operations, went dca unit to diagnose and change motor with Tech1. Also swapped out humidity sensor for dca. When finished we checked out with front desk

Had someone open the dca room from inside. We had already picked up a motor from general motor that had been rebuilt. Pulled bad blower motor out. Installed new one. The original motor had a bigger motor sheave so we swapped it out also to keep that the same. Wired motor back up, start and check direction and operations. Bad motor is under the supply duct if they need it.

Checked in and went to the roof. Pulled motor sheave. As soon as i got it pulled david from general motor pulled in and we got started removing bearings from blower motor. We changed both sets of bearings and i installed the sheave. Put new belts on and checked operations. As we was leaving and checking out with craig we discussed the dca unit blower that i just changed and the bad one still there. I took it to general motor for bearing swap so golds gym now has a spare when ready.

Xoi was down at the time. I received an email to update.
